It doesn't seem to be where the manual says it should be. Does anyone have a helpful picture which identifies it's position?</p> <p>JBS</p>

My 2002 MD2030 has a large squared nut about half way down the block near the oil filter which I believe is the drain plug.</p> <p>It is very tight. Did you find another way to drain down the coolant?</p> <p>Regards PAF</p>
