I am considering drying out once or twice a year to replace them. As I have never done it before can anyone give me some tips and suitable sites in the Solent. Also has anyone used the type of anode that hangs over the side when moored up? If so do they work?</p>

I used the resident diver in Haslar (just ask in the marina office). He charged me £35 and did a fine job. When I finally had the boat lifted (after 2 years in the water), the 'new' anodes were only half gone.</p> <p>Roger Playtime (B38 Ocean)</p>
